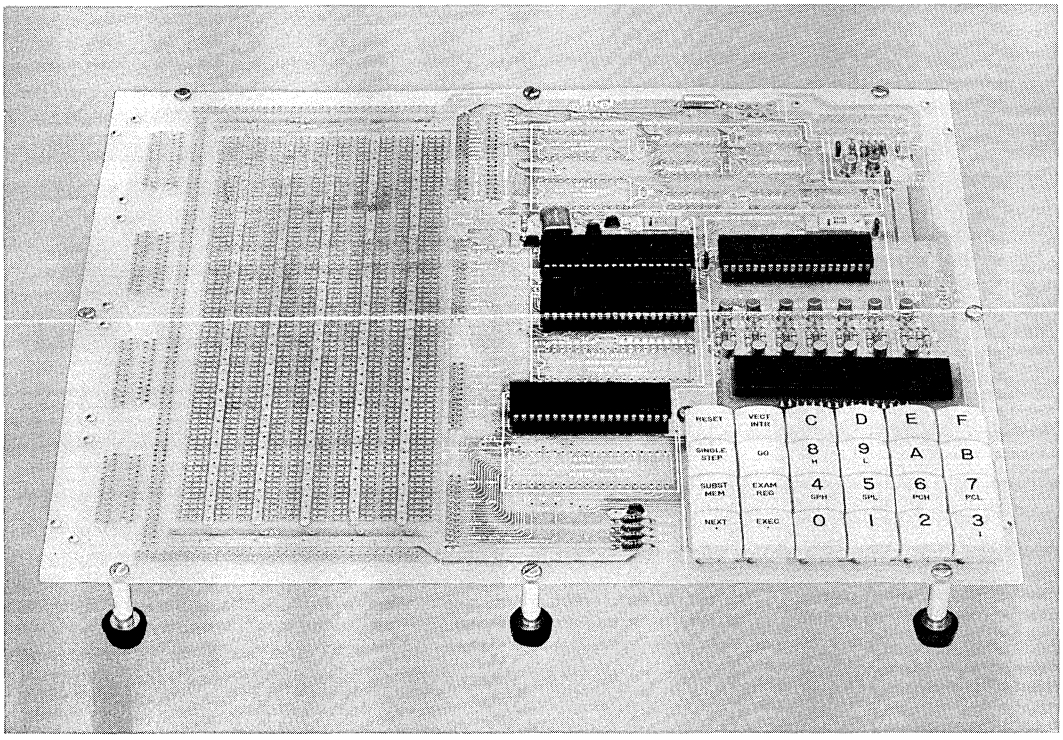
SDK-85
MCS-85™ SYSTEM DESIGN KIT

- **Complete Single Board Microcomputer System Including CPU, Memory, and I/O**
- **Easy to Assemble, Low Cost, Kit Form**
- **Extensive System Monitor Software in ROM**
- **Interactive LED Display and Keyboard**
- **Large Wire-Wrap Area for Custom Interfaces**
- **Popular 8080A Instruction Set**
- **Interfaces Directly with TTY**
- **High Performance 3 MHz 8085A CPU (1.3 μs Instruction Cycle)**
- **Comprehensive Design Library Included**

The SDK-85 MCS-85 System Design Kit is a complete single board microcomputer system in kit form. It contains all components required to complete construction of the kit, including LED display, keyboard, resistors, caps, crystal, and miscellaneous hardware. Included is a preprogrammed ROM containing a system monitor for general software utilities and system diagnostics. The complete kit includes a 6-digit LED display and a 24-key keyboard for a direct insertion, examination, and execution of a user's program. In addition, it can be directly interfaced with a teletype terminal. The SDK-85 is an inexpensive, high performance prototype system that has designed-in flexibility for simple interface to the user's application.



FUNCTIONAL DESCRIPTION

The SDK-85 is a complete 8085A microcomputer system on a single board, in kit form. It contains all necessary components to build a useful, functional system. Such items as resistors, capacitors, and sockets are included. Assembly time varies from three to five hours, depending on the skill of the user. The SDK-85 functional block diagram is shown in Figure 1.

8085A Processor

The SDK-85 is designed around Intel's 8085A microprocessor. The Intel 8085A is a new generation, complete 8-bit parallel central processing unit (CPU). Its instruction set is 100% software upward compatible with the 8080A microprocessor, and it is designed to improve the present 8080A's performance by higher system speed. Its high level of system integration allows a minimum system of three IC's: 8085A (CPU), 8156 (RAM), and 8355/8755 (ROM/PROM). A block diagram of the 8085A microprocessor is shown in Figure 2.

System Integration — The 8085A incorporates all of the features that the 8224 (clock generator) and 8228 (system controller) provided for the 8080A, thereby offering a high level of system integration.

Addressing — The 8085A uses a multiplexed data bus. The 16-bit address is split between the 8-bit address bus and the 8-bit address/data bus. The on-chip address latches of 8155/8156/8355/8755 memory products allows a direct interface with the 8085A.

System Monitor

A compact but powerful system monitor is supplied with the SDK-85 to provide general software utilities and system diagnostics. It comes in a pre-programmed ROM.

Communications Interface

The SDK-85 communicates with the outside world through either the on-board LED display/keyboard combination, or the user's TTY terminal (jumper selectable

- SEVEN 8-BIT REGISTERS. SIX OF THEM CAN BE LINKED IN REGISTER PAIRS FOR CERTAIN OPERATIONS.
- 8-BIT ALU.
- 16-BIT STACK POINTER (STACK IS MAINTAINED OFFBOARD IN SYSTEM RAM MEMORY).
- 16-BIT PROGRAM COUNTER.

Figure 2. 8085A Microprocessor Block Diagram

Both memory and I/O can be easily expanded by simply soldering in additional devices in locations provided for this purpose. A large area of the board (45 sq. in.) is laid out as general purpose wire-wrap for the user's custom interfaces.

Assembly

Only a few simple tools are required for assembly; soldering iron, cutters, screwdriver, etc. The SDK-85 user's manual contains step-by-step instructions for easy assembly without mistakes. Once construction is complete, the user connects his kit to a power supply and the SDK-85 is ready to go. The monitor starts immediately upon power-on or reset.

Table 1. Keyboard Monitor Commands

Command	Operation
Reset	Starts monitor.
Go	Allows user to execute user program.
Single step	Allows user to execute user program one instruction at a time—useful for debugging.
Substitute memory	Allows user to examine and modify memory locations.
Examine register	Allows user to examine and modify 8085A's register contents.
Vector interrupt	Serves as user interrupt button.

Commands — Keyboard monitor commands and teletype monitor commands are provided in Table 1 and Table 2 respectively.

Table 2. Teletype Monitor Commands

Command	Operation
Display memory	Displays multiple memory locations.
Substitute memory	Allows user to examine and modify memory locations one at a time.
Insert instructions	Allows user to store multiple bytes in memory.
Move memory	Allows user to move blocks of data in memory.
Examine register	Allows user to examine and modify the 8085A's register contents.
Go	Allows user to execute user programs.

Documentation

In addition to detailed information on using the monitors, the SDK-85 user's manual provides circuit diagrams, a monitor listing, and a description of how the system works. The complete design library for the SDK-85 is shown in Figure 7-11 and listed in the Specifications section under Reference Manuals.

SPECIFICATIONS

Central Processor

CPU — 8085A

Instruction Cycle — 1.3 μs

Tcy — 330 ns

Memory

ROM — 2K bytes (expandable to 4K bytes) 8355/8755A

RAM — 256 bytes (expandable to 512 bytes) 8155

Addressing

ROM — 0000-07FF (expendable to 0FFF with an additional 8355/8755A)

RAM — 2000-20FF (2800-28FF available with an additional 8155)

Note

The wire-wrap area of the SDK-85 PC board may be used for additional custom memory expansion up to the 64K-byte addressing limit of the 8085A.

Input/Output

Parallel — 38 lines (expandable to 76 lines)

Serial — Through SID/SOD ports of 8085A. Software generated baud rate.

Baud Rate — 110

Interfaces

Bus — All signals TTL compatible
Parallel I/O — All signals TTL compatible
Serial I/O — 20 mA current loop TTY

Note
By populating the buffer area of the board, the user has access to all bus signals that enable him to design custom system expansions into the kit's wire-wrap area.

Interrupts

Three Levels
(RST 7.5) — Keyboard interrupt
(RST 6.5) — TTL input
(INTR) — TTL input

DMA

Hold Request — Jumper selectable. TTL compatible input.

Software

System Monitor — Pre-programmed 8755A or 8355 ROM
Addresses — 0000-07FF
Monitor I/O — Keyboard/display or TTY (serial I/O)

Physical Characteristics

Width — 12.0 in. (30.5 cm)
Height — 10 in. (25.4 cm)
Depth — 0.50 in. (1.27 cm)
Weight — approx. 12 oz

Electrical Characteristics

DC Power Requirement (power supply not included in kit)

Voltage	Current
V_{CC} 5V ± 5%	1.3A
V_{TTY} – 10V ± 10%	0.3A (V_{TTY} required only if teletype is connected)

Environmental Characteristics

Operating Temperature — 0-55°C
