

HOW TO DOWNLOAD AND UPDATE A COMPLETE COLLECTION

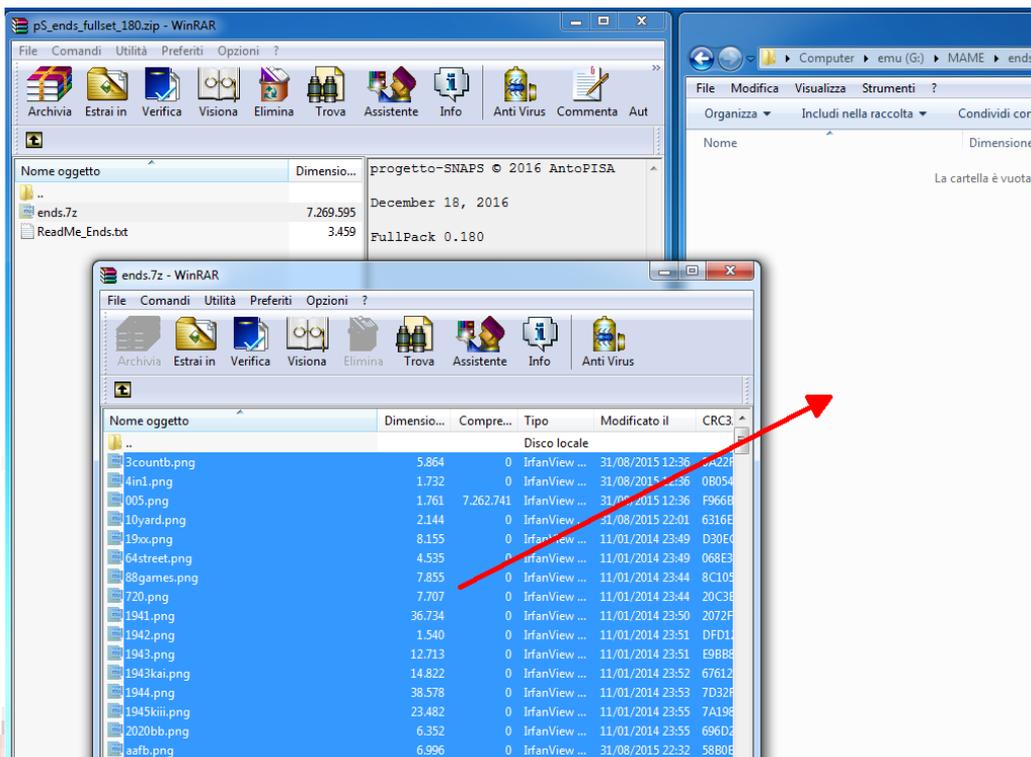

a project by antopisa ☆ Italy

(using ClrMAME)

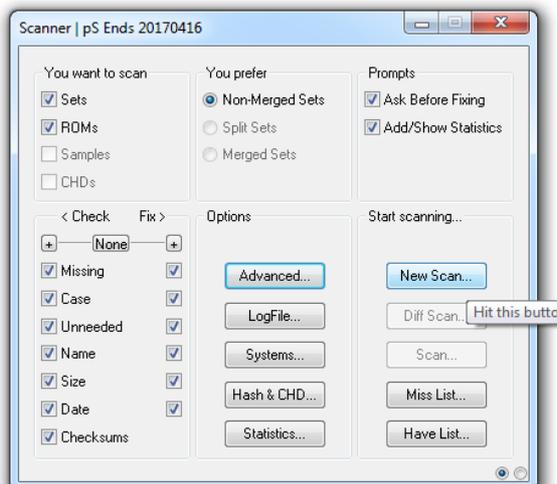

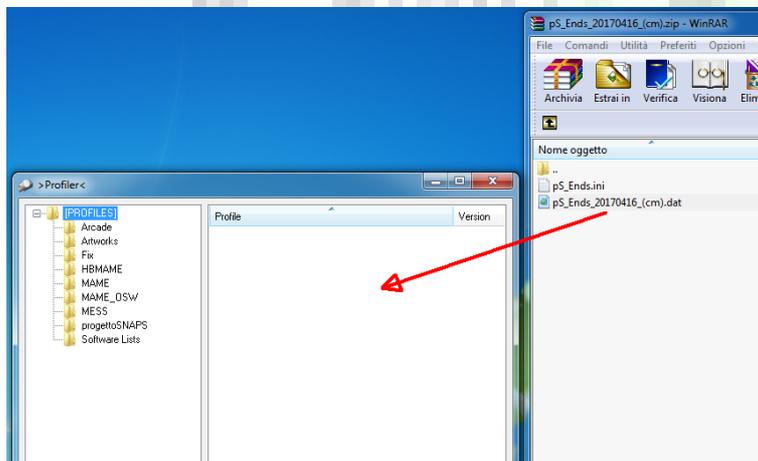

1. Download all of the packages on this page, starting with the one named "**Full Set**" and even the latest version of ClrMAME dat.

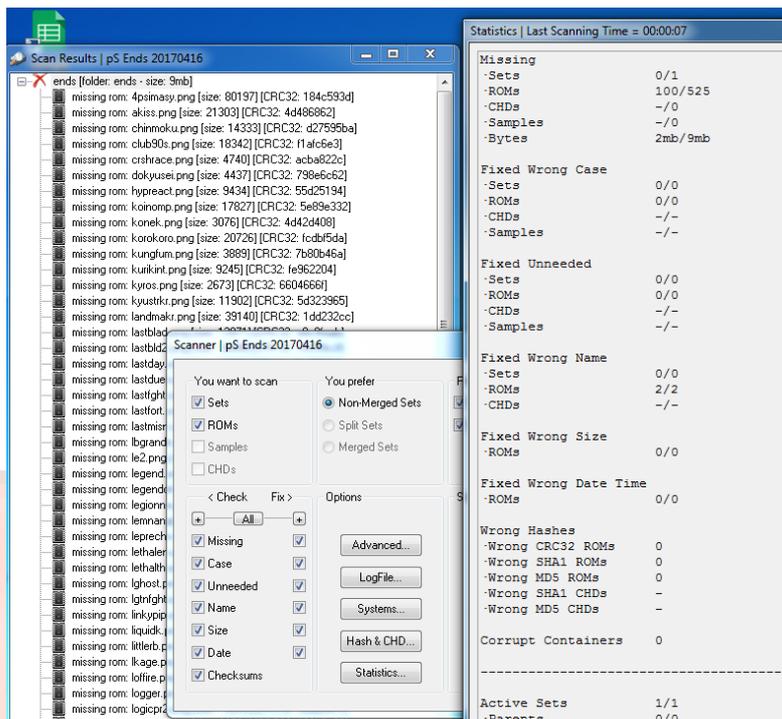

2. Extract all png images of the "**Full Set**" in a folder (where you want to store images).

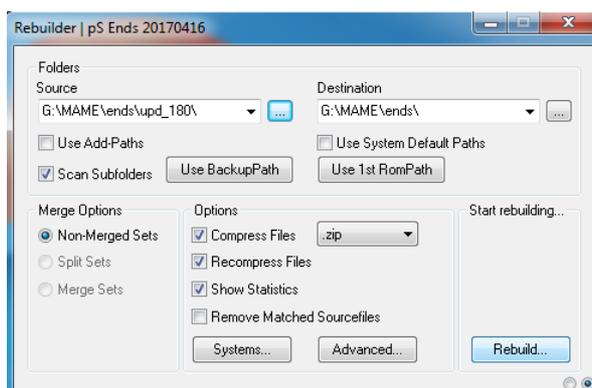

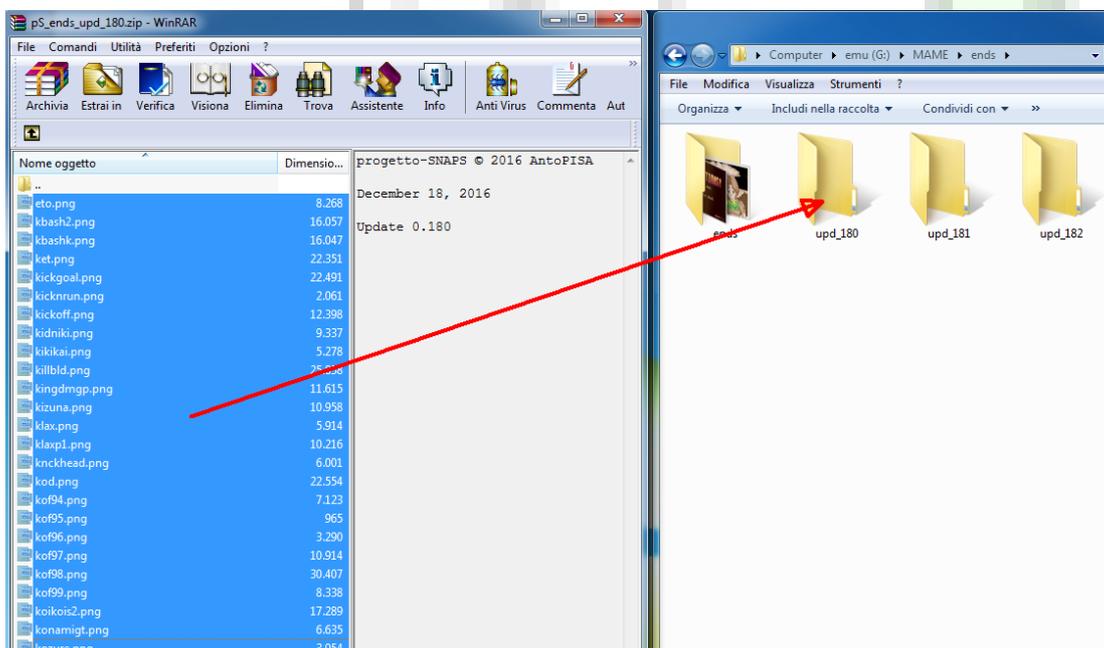

3. Start CIRMAME and load the related dat; take a first "New Scan..." with all activated fixes (many files will be marked absents).

4. Using the "Rebuild" option and after extracting the "update" packages in separate folders, add the missing images.

5. Repeat the scan but using the "**Scan...**" (fast) option.
6. Repeat steps 4 and 5 as many times as the upgrade packages are.
7. When you finish, again full scan with all activated fixes.

Statistics New Scan-Time = 00:00:07	
Missing	
-Sets	0/1
