## **SYSTEM 3 OVERVIEW**

System 3 contains many new features which improve game play and reliability. Some of these features are as follows:

- 1) New lithium battery provides data retention for a minimum of 5 years under normal operation and virtually eliminates battery leakage. Also a low battery warning is given in the displays when the voltage drops to the critical level.
- 2) New interlocking connector system for improved reliability.
- 3) Use of High Speed CMOS technology for low power consumption and cooler operation.
- 4) Improved solenoid driver reliability due to simplified circuitry and the use of Rugged Power MOSFETS.
- 5) Lamp short protection.
- 6) Switch matrix input protection.
- 7) Easy line voltage adjustment on location.
- 8) Improved bookkeeping functions.
- 9) Improved display control.
- 10) Capability for operators to enter their own messages in the attract mode.

**"WARNING:** This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference."

# I. INSTALLATION

## A. SET-UP

1. Bolt the legs to the cabinet.
2. Lift lightbox into an upright position. Be sure none of the cables are crimped in between the lightbox and cabinet.
3. Engage the snap in the rear of the lightbox to the cabinet.
4. To remove the lightbox backglass and gain servicing access to the electronics panel and the insert lamp assembly, proceed as follows:

Unlock the lightbox by turning the key a quarter turn counter-clockwise, the hinged speaker panel grill will swing out toward you.

The backglass is held in place in the retaining groove at the bottom ledge of the lightbox and the wood retaining tabs on each side. Lift the backglass up about an inch, pull the bottom of the backglass toward you and slide it down past the two wood retaining tabs, carefully set aside.

Unloosen the two wing nuts on the left side and push the lock slide upwards, this allows the lightbox lamp insert to swing out and gaining access to service the back side and access to the electronics panel.

5. Secure the lightbox to the cabinet with the bolts and washers provided.

Reverse the aforementioned procedure as the first step to re-assemble the lightbox.

To replace the backglass, slide the backglass up behind the wood retaining tabs and set down into the bottom retaining groove.

To secure the backglass, pivot the speaker panel grill towards the back-glass and turn the key clockwise a quarter turn, the lightbox is now locked.

6. Open the cabinet door and loosen the front moulding locking arm.
7. Remove the moulding from the play-field.

8. Slide the cabinet glass toward you and remove it.
9. Raise the playboard, slide it forward and rest it on its support.
10. Unravel and straighten out the power line cord located at the rear of the pinball cabinet.
11. Proceed to "B. CHECK-OUT".

## B. CHECK-OUT

1. Check that all cables are clear of moving parts.
2. Check for any loose wires.
3. Check switches for loose solder or other foreign matter.
4. Be certain all fuses are firmly seated.
5. Check transformer for any foreign matter across terminals.
6. Be sure that the Transformer Panel power input connector A12J5, corresponds to the supply voltage.
7. Check the setting of the normally open tilt switch on the underside of the playfield. One blade should be free-floating with a weight on the end.
8. Lower the playfield into the cabinet. Using the leg adjusters, level the playfield and set the pitch. Recommended pitch is 6°.
9. The plumb-bob tilt can be adjusted by loosening the clip and raising the plumb-bob to increase its sensitivity, or lowering it to decrease its sensitivity.
10. Reinstall the cabinet glass, front moulding and the lightbox assembly.
11. Plug the line-cord into a properly grounded 3-wire receptacle ONLY!
12. Refer to Section III to make all necessary game adjustments.
13. CAUTION! If this game has been subjected to extreme cold, allow to warm up to room temperature.

# I. INSTALLATION

## C. COIN METER (OPTIONAL)

A +12vdc mechanical coin meter may be installed by the operator to count total coins accepted by the machine. The coin meter leads should be soldered to the lugs on the terminal strip mounted inside the front door on the right side (see Figure 1). If the coin meter is polarized, the positive lead (red) should be attached to the lug that has the cathode (banded) side of the diode attached to it otherwise the leads may be attached in any order. The COIN METER adjustment must be set to on and make sure that the GAME MODE adjustment is not set to either REPLAY + TICKETS or TICKETS ONLY (see Game Adjustments section).

## D. TICKET DISPENSER (OPTIONAL)

This machine is equipped to easily interface to the Deltronic Labs #DL-4-S-S ticket dispenser with the outside mounting option. To install the dispenser, first locate the five partially drilled holes on the inside of the cabinet on the right side (see Figure 1). The four "A" holes are for mounting the cabinet with #10 X 1-1/4" carriage bolts. The "B" hole is for cable access to the unit. Drill the "A" holes out from

the inside of the cabinet using a 13/64" drill bit. Drill the "B" hole out from the inside of the cabinet using a 1" drill bit. The GAME MODE adjustment is used to set whether to dispense a number of tickets along with each replay awarded (REPLAY + TICKETS) or to dispense a number of tickets in place of each replay awarded (TICKETS ONLY). The TICKETS TO AWARD adjustment is used to set the number of tickets to dispense for each replay awarded (see Game Adjustments section).

NOTE: Make sure that the COIN METER adjustment is set to off when using a ticket dispenser.

## E. BILL ACCEPTOR (OPTIONAL)

A bill acceptor can be easily interfaced electrically to this machine. The two unused 522 (green-red-red) and 622 (blue-red-red) center chute switch wires should be attached to the switch output of the bill acceptor (see Cabinet/Lightbox Schematic Diagram). The line voltage outlet located inside the cabinet on the right side can be used for supplying power to the unit. The CENTER CHUTE SETTING adjustment can then be used to set the number of credits to be issued for each bill accepted.

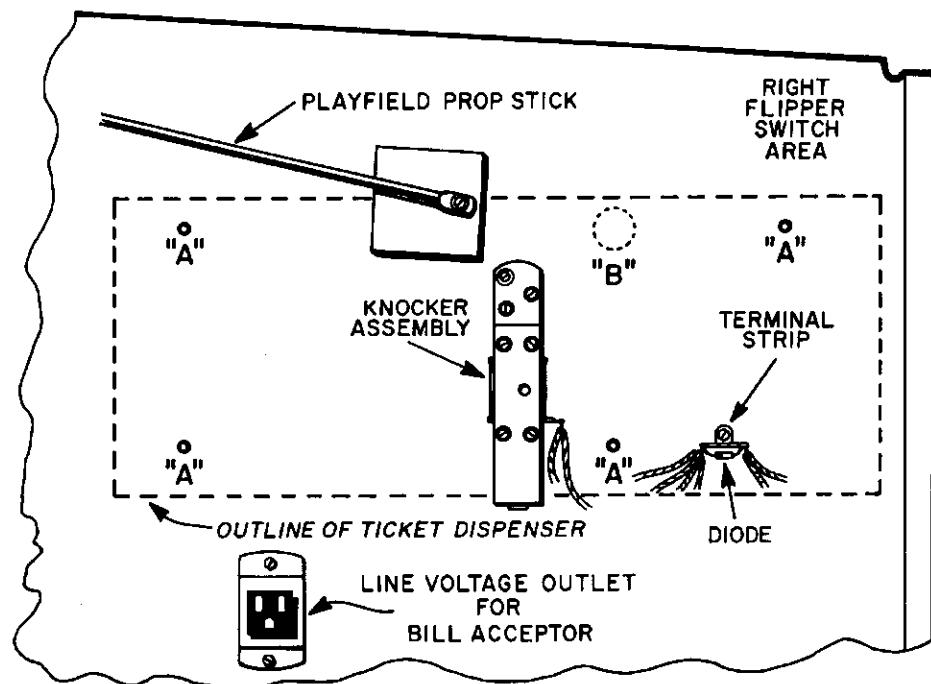

FIGURE 1.

## II. GAME PLAY AND SCORING

# Deadly WEAPON™

## HOW TO PLAY

### #1 - #5 SPOT TARGETS:

- SCORE 5,000 (3-BALL) OR 3,000 (5-BALL).
- COMPLETING ALL 5 TARGETS RESTARTS SEQUENCE AND AWARDS AN EXTRA BALL IF LIT, ADVANCES BONUS MULTIPLIER IF LIT, OR ADDS 1 ARREST IF LIT.

### #1 - #3 DROP TARGETS:

- SCORE 5,000.
- COMPLETING ALL 3 TARGETS IN NORMAL MODE RESTARTS THE SEQUENCE AND INCREASES BONUS IF LIT OR ADDS 1 ARREST IF LIT.
- COMPLETING ALL 3 TARGETS WHILE IN THE "MILLION TIMES X" BONUS ROUND SCORES 1,000,000 TIMES THE MULTIPLIER AND RESTARTS THE SEQUENCE.

### TOP POP BUMPERS AND KICKING TARGET:

- IN NORMAL MODE, SCORE 1,000 AND ADVANCE "POP BONUS" 10,000 (3-BALL) OR 5,000 (5-BALL).
- IN A BONUS ROUND, SCORE 3,000 (3-BALL) OR 1,000 (5-BALL).
- TOGGLES THE MYSTERY LAMPS, OUTLANE ADD BADGE LAMPS, AND EB LAMP IF ADJUSTED.
- IN THE "SPECIAL" BONUS ROUND, MOVES THE FLASHING CRIME SCENE.
- STARTS "LIGHT COLLECT POP BONUS" FLASHING.

### BOTTOM POP BUMPER & KICKING RUBBER:

- SCORE 30.
- IN THE "SPECIAL" BONUS ROUND, MOVES THE FLASHING CRIME SCENE.
- TOGGLES THE MYSTERY LAMPS, OUTLANE ADD BADGE LAMPS, AND EB LAMP IF ADJUSTED.

### LEFT SPINNER:

- SCORE 100 OR 10,000 IF INCREASE JACKPOT LIT.
- IF INCREASE JACKPOT LIT, ADD 10, 20, OR 30 THOUSAND TO JACKPOT PER ADJUSTMENT.
- LIGHT "WEST SIDE" LAMP. IF BOTH "WEST SIDE" & "EAST SIDE" ARE LIT, START "EAST SIDE" FLASHING.
- IF YELLOW SQUAD CAR 7 FLASHING, ADD 1 ARREST, COLLECT ANY REMAINING SQUAD CAR POINTS, AND LIGHT ADD YELLOW BADGE.

### RIGHT SPINNER:

- SCORE 1,000 OR 10,000 IF INCREASE JACKPOT LIT.
- IF INCREASE JACKPOT LIT, ADD 10, 20, OR 30 THOUSAND TO JACKPOT PER ADJUSTMENT.
- IF SQUAD CAR 6 IS FLASHING IN NORMAL MODE, ADD 1 ARREST AND COLLECT ANY REMAINING SQUAD CAR POINTS.
- IF THE "BANK" CRIME SCENE IS FLASHING IN NORMAL MODE, COLLECT ARRESTS PER ADJUSTMENT.

## **II. GAME PLAY AND SCORING**

### **LEFT HOLE:**

- SCORE 5,000.
- COLLECT SKILL SHOT AWARD IF SKILL SHOT ACTIVE.
- ENTER "MYSTERY" MODE IF MYSTERY FLASHING.
- ADD A YELLOW BADGE IF LIT.
- ENTER THE "PIK-5" MODE IF PIK-5 FLASHING.
- ENTER THE "RIOT" BONUS ROUND IF SUPERCOP FLASHING.

### **RIGHT HOLE:**

- SCORE 5,000.
- ENTER "MYSTERY" MODE IF MYSTERY FLASHING.
- ADD A RED BADGE IF LIT.
- COLLECT "POP BONUS" IF FLASHING.

### **LEFT OUTLANE DRAIN:**

- KICKSAVE UNLIT SCORES 50,000 (3-BALL) OR 20,000 (5-BALL).
- KICKSAVE LIT SCORES 5,000 AND RETURNS BALL INTO PLAY.

### **RIGHT OUTLANE DRAIN:**

- SCORES 50,000 (3-BALL) OR 20,000 (5-BALL).
- ADD A BADGE IF LIT.

### **STAR ROLLOVER:**

- SCORE 10.
- IN NORMAL MODE, LIGHT INCREASE JACKPOT LAMPS.
- SPOT FLASHING SQUAD CAR IF LIT.

### **TOP LEFT ROLLOVER:**

- SCORE 5,000.
- IF SQUAD CAR 3 FLASHING IN NORMAL MODE, ADD 1 ARREST AND COLLECT ANY REMAINING SQUAD CAR POINTS.
- IF "WEST SIDE PUMP" CRIME SCENE FLASHING IN NORMAL MODE, COLLECT ARRESTS PER ADJUSTMENT.

### **#1 CENTER ROLLOVER:**

- SCORE 20,000.
- IF "LIGHT COLLECT POP BONUS" FLASHING, LIGHTS "SUPERCOP" AND "COLLECT POP BONUS" LAMPS.

### **#2 CENTER ROLLOVER:**

- SCORE 5,000.
- IF SQUAD CAR 5 FLASHING IN NORMAL MODE, ADD 1 ARREST AND COLLECT ANY REMAINING SQUAD CAR POINTS.
- IF "ALLEY" CRIME SCENE FLASHING IN NORMAL MODE, COLLECT ARRESTS PER ADJUSTMENT.

### **#3 CENTER ROLLOVER:**

- SCORE 5,000.
- LIGHT KICKSAVE IF LIT PER ADJUSTMENT.
- IF RED SQUAD CAR 7 FLASHING IN NORMAL MODE, ADD 1 ARREST, COLLECT ANY REMAINING SQUAD CAR POINTS, AND LIGHT "ADD RED BADGE".
- IF "BURGER GRILL" CRIME SCENE FLASHING IN NORMAL MODE, COLLECT ARRESTS PER ADJUSTMENT.

### **TOP RIGHT ROLLOVER:**

- SCORE 5,000.
- IF SQUAD CAR 1 FLASHING IN NORMAL MODE, ADD 1 ARREST AND COLLECT ANY REMAINING SQUAD CAR POINTS.
- IF "MALL" CRIME SCENE FLASHING IN NORMAL MODE, COLLECT ARRESTS PER ADJUSTMENT.

## **II. GAME PLAY AND SCORING**

### **RIGHT SIDE MIDDLE ROLLOVER:**

- SCORE 5,000.
- IF "EAST SIDE" IS FLASHING, COLLECT JACKPOT AND RESTART AT 1,000,000.
- IF "EAST SIDE" IS UNLIT, LIGHT IT. IF BOTH "EAST SIDE" & "WEST SIDE" ARE NOW LIT, START "EAST SIDE" FLASHING PER ADJUSTMENT.
- IF SQUAD CAR 4 FLASHING IN NORMAL MODE, ADD 1 ARREST AND COLLECT ANY REMAINING SQUAD CAR POINTS.
- IF "EAST SIDE HIGH" CRIME SCENE FLASHING IN NORMAL MODE, COLLECT ARRESTS PER ADJUSTMENT.

### **BOTTOM RIGHT RETURN ROLLOVER:**

- SCORE 5,000.
- LIGHT INCREASE JACKPOT LAMPS IF NORMAL MODE.
- IF SQUAD CAR 2 FLASHING IN NORMAL MODE, ADD 1 ARREST AND COLLECT ANY REMAINING SQUAD CAR POINTS.

### **OUTHOLE:**

- COLLECT BONUS TIMES MULTIPLIER.
- SCORE 10,000 FOR EACH ARREST.

## **ADDITIONAL FEATURES**

### **JACKPOT:**

- RESETS TO 1,000,000 WHEN GAME IS TURNED ON. JACKPOT INCREASES FOR EACH TURN OF THE SPINNERS WHEN LIT PER ADJUSTMENT. JACKPOT IS COLLECTED BY SHOOTING THE FLASHING "EAST SIDE" OR "WEST SIDE".

### **PIK-5 FEATURE:**

- THE PLAYER SELECTS ONE OF 5 AWARDS RANDOMLY DISPLAYED. PIK-5 LIGHTS FROM THE PLUNGER SKILL SHOT OR AFTER COMPLETING FLASHING SQUAD CAR 5 WHILE IN NORMAL PLAY.

### **MULTIBALL FEATURE:**

- THIS FEATURE IS ENTERED FROM THE "MYSTERY" OR "PIK-5" FEATURES. THE PLAYER HAS THE OPTION OF PLAYING FOR 10 ARRESTS OR MILLIONS OF POINTS. THE AWARD IS COLLECTED BY COMPLETING ALL 6 FLASHING SQUAD CARS DURING MULTIBALL. GAME PERMITS 2 OR 3 BALL MULTIBALL PLAY.

### **CATCH-UP FEATURE:**

- IF A PLAYER IS AWARDED CATCH-UP FROM "PIK-5" OR "MYSTERY", HIS SCORE OR ARRESTS BECOMES IMMEDIATELY EQUAL TO THE NEXT HIGHER PLAYER. IF HE ALREADY HAS THE HIGHEST, THEN HE RECEIVES 10 ARRESTS OR 1,000,000 POINTS.

### **RIOT BONUS ROUND:**

- THIS BONUS ROUND IS ACHIEVED BY SHOOTING "SUPERCOP" OR BY COMPLETING THE LAST LETTER OF "WEAPON". ALL 6 CRIME SCENES BEGIN FLASHING FOR AN ADJUSTABLE TIME PERIOD. EACH FLASHPOINT SHOT MADE EARNS 3 ARRESTS. ALL 6 COMPLETE EARNS AN EXTRA 10 ARRESTS AND A SPECIAL.

### **MYSTERY FEATURE:**

- IN THE MYSTERY FEATURE, AN AWARD IS RANDOMLY SELECTED AND THEN AWARDED TO THE PLAYER.

## **II. GAME PLAY AND SCORING**

### **SPECIAL BONUS ROUND:**

- THIS ROUND IS ENTERED AFTER COMPLETING ALL 5 RED BADGES. ONE CRIME SCENE WILL BEGIN FLASHING FOR AN ADJUSTABLE TIME PERIOD. MAKING THE FLASHPOINT AWARDS A SPECIAL. THE ROUND WILL END OR CONTINUE WITH A NEW FLASHPOINT DEPENDING ON ADJUSTMENT. CRIME SCENES MOVE AROUND THE PLAYFIELD FROM POP BUMPER AND KICKING RUBBER HITS.

### **MILLION TIMES X BONUS ROUND:**

- THIS ROUND IS ENTERED AFTER COMPLETING ALL 5 YELLOW BADGES. IN A 3-BALL GAME THE MULTIPLIER IS ADVANCED 1 STEP. THE DROP TARGETS BEGIN FLASHING FOR AN ADJUSTABLE TIME PERIOD. COMPLETING DROP TARGETS SCORES 1,000,000 TIMES THE BONUS MULTIPLIER.

### **EXTRA BALL FOR ARRESTS:**

- AN EXTRA BALL CAN BE EARNED FOR MAKING 20, 40, OR 60 ARRESTS PER ADJUSTMENT.

### **FLASHING CRIME SCENES - FLASHPOINTS:**

- DURING NORMAL MODE PLAY, RANDOM CRIME SCENES BEGIN FLASHING. MAKING THE FLASHPOINT AWARDS ARRESTS PER ADJUSTMENT.

### **POP BONUS:**

- EACH PLAYER HAS HIS OWN POP BONUS COUNTER STARTING AT 1,000,000. THE BONUS IS ADVANCED FROM EVERY UPPER POP BUMPER HIT AND COLLECTED IN THE RIGHT HOLE IF FLASHING.

### **III. TEST MODE**

There are several functions accessible to the operator while in the test mode. These functions are Self-Test, Bookkeeping, Game Adjustments, and Burn-In. Each of these functions will be explained in detail later in this section. To enter the test mode, the game must be in the attract mode (game over). Then depress the Test button located just inside the front door of the game. The operator will be given a choice as to which function he wants to access. Depressing the appropriate button will select that function. To exit the test mode or change functions the slam switch (front door) must be activated or the power must be turned off.

#### **I. SELF-TEST**

This function will allow the operator to test all the hardware related devices in the game. Each test is described below.

#### **A. MEMORY TEST**

This function tests all memory devices on the Control Board (A1). If all the devices pass the test an "OK" will be displayed. If a failure occurs, a description of the faulty component will be displayed. Then after a short period of time the Game Prom check sum will be displayed. The Credit button can be used to restart this test.

#### **B. LAMP CHECK**

This function will flash all the controlled lamps continuously. This will allow the operator to easily check for and replace any burned out light bulbs.

#### **C. LAMP MATRIX TEST**

This test will allow the operator to single step through and check the operation of each lamp in the game. The left black cabinet button will decrement the active lamp number by one while the right black cabinet button will increment the active lamp number by one. The strobe number and the return number are combined to form

the lamp number (strobe,return) which is shown in the display. The Credit button can be used to restart this test. Only one lamp at a time should flash during this test.

#### **D. RELAY AND SOLENOID TEST**

This test will allow the operator to single step through and check the operation of each relay and solenoid driver in the game. The left black cabinet button will decrement the driver number shown in the display while the right black cabinet button will increment the driver number. The Credit button is then used to activate the driver for a short time period. Solenoid #31 ("Q" relay) is always on during this test so as to provide power to devices such as the pop bumpers and kicking rubbers.

#### **E. SWITCH MATRIX TEST**

This test will allow the operator to test the operation of all the switches used in the game. If no switches are closed when this test is started, the message "ALL SWITCHES OPEN" will be displayed. If any switches are closed either before or after this test is started, the closed switch number(s) will be displayed. The strobe number and the return number are combined to form the switch number (strobe,return). The Credit button can be used to restart this test.

#### **F. DISPLAY TEST**

This test will allow the operator to check the operation of the individual digits and segments of the displays. Depressing the right black cabinet button will advance to the next step of the test. The displays will first step through all the individual segments followed by all the individual digits. The Credit button can be used to restart this test.

#### **G. LED DISPLAY TEST**

This test will allow the operator to check the operation of the individual digits of the LED

### **III. TEST MODE**

Display Board. Depressing the right black cabinet button will advance to the next step of the test. The digits 0-9 will appear in numerical order starting from the leftmost (DIG1) to rightmost (DIG8). Only one digit should light during each step of this test.

#### **H. SOUND TEST**

This test allows the operator to test the interface lines from the Control Board (A1) to the Sound Board (A6). Every time the right black cabinet button is depressed, a tone should be heard from the Sound Board. During each tone, the sound line connection which is being tested will be displayed. After the tone stops the sound line which is being tested will still be kept at a low level (<.8v) until the right black cabinet button is depressed again or the Credit button is used to restart the test.

#### **I. FRONT DOOR TEST**

This test allows the operator to check the operation of the coin chutes used in the game. Utilizing this function will not affect any bookkeeping values. Each coin chute closure is categorized and shown in the display. The Credit button can be used to restart this test.

#### **II. BOOKKEEPING**

The Test button is used to step through bookkeeping. The upper display will contain a description of each step while the lower display will contain the step number and two different bookkeeping values. The value in the leftmost column represents long term bookkeeping. The value in the rightmost column (in brackets) represents short term bookkeeping. These two values are provided so that the operator may compare recent performance with long term performance and then make any necessary game adjustments.

NOTE: The first three left steps (coin chute counts) will not be displayed unless the credit button is pressed during that active step number.

The left black cabinet button will allow the operator to reset all of the left (long term) and right (short term) bookkeeping values. The right black cabinet button will allow the operator to reset all of the short term (right) bookkeeping only. If the R.BOOK AUTO-RESET adjustment is ON, the short term bookkeeping will automatically be reset after every 2000 plays (see Game Adjustments). Therefore, the operator does not need to reset the short term bookkeeping himself unless he prefers to follow his own procedure. Also, this feature will aid in adjusting the game payout percentage to the caliber of players in different locations. If there happens to be a major error in a long term bookkeeping value the letters ERR will appear to the right of that bookkeeping value. To correct this error the long term bookkeeping must be reset. A description of each bookkeeping step is given in the test mode flowchart.

### **III. GAME ADJUSTMENTS**

This function allows the operator to make any adjustments to his game as necessary from time to time.

#### **A. FACTORY SETTINGS**

Upon entering the game adjustment section of bookkeeping, the operator is given a choice to load all factory settings or to single step through bookkeeping and adjust each value separately. If he chooses to enter the factory settings by depressing the Credit button, he will also be given a choice of what language to load. By using the right black cabinet button he may choose the appropriate language and then depress the Credit button to enter the settings. After the settings are loaded the display should show the message "FACTORY SETTINGS LOADED" for a short time and then proceed to game adjustment step 1. At any time during the previous steps the operator may either exit the test mode or depress the Test

### **III. TEST MODE**

button to proceed immediately to game adjustment step 1.

#### **WARNING**

Loading the factory settings will affect all previous game adjustment settings. Therefore be careful when selecting this feature.

#### **B. GAME ADJUSTMENT STEPS**

Each time the Test button is pressed a description of the next step appears in the upper display while the lower display contains the step number and the current status of that step.

- 1) SCORE REPLAY LEVEL 1
- 2) SCORE REPLAY LEVEL 2
- 3) SCORE REPLAY LEVEL 3

Each Score Replay Level may be set by using the left black cabinet button to decrement the score and the right black cabinet button to increment the score. The Credit button can be used to load the factory setting for each individual level if desired. If the Auto-Percentaging adjustment is on, Replay Levels 2 & 3 can only be set to on or off. If Replay Level 2 is on, the score level will be set to two times Replay Level 1. If Replay Level 3 is on, the score level will be set to three times Replay Level 1. This allows the operator several combinations of levels in the Auto-Percentaging mode (i.e. 1, 1 & 2, 1 & 3, or 1 & 2 & 3).

- 4) HIGH GAME TO DATE 1
- 5) HIGH GAME TO DATE 2
- 6) HIGH GAME TO DATE 3
- 7) HIGH GAME TO DATE 4
- 8) HIGH GAME TO DATE 5

Each High Game To Date may be set by using the left black cabinet button to decrement the score and the right black cabinet button to increment the score. The Credit button can be used to load the factory setting for the displayed level and all those below it.

- 9) LEFT CHUTE SETTING
- 10) RIGHT CHUTE SETTING

#### **11) CENTER CHUTE SETTING**

These three steps will set the coinage required to receive credits on the machine. The left black cabinet button is used to decrement the credits to be issued for the active coin while the right black cabinet button is used to increment the credits to be issued. The Credit button is used to change the active coin. The operator may enter up to a four coin sequence.

NOTE: If a coin sequence of less than four coins is used, enter 0 credits in each of the remaining coin positions.

#### **Example 1**

The following would be the setting for a 25 cent chute set to 50 cents for 1 play, 75 cents for 2 plays, and \$1.00 for 3 plays.

COIN 1 = 0 CREDITS  
COIN 2 = 1 CREDITS  
COIN 3 = 1 CREDITS  
COIN 4 = 1 CREDITS

#### **Example 2**

The following would be the setting for a 25 cent chute set to 50 cents per play.

COIN 1 = 0 CREDITS  
COIN 2 = 1 CREDITS  
COIN 3 = 0 CREDITS  
COIN 4 = 0 CREDITS

#### **12) GAME PERCENT PAYOUT**

This step is used to set the game payout percentage used when the Auto-Percentaging adjustment is on. When the GAME MODE is set to Replay, Replay + Tickets, or Tickets, this setting refers to replay percentage. When the GAME MODE is set to Add a Ball this setting refers to extra ball percentage.

#### **13) MATCH PERCENT PAYOUT**

This step is used to set the match payout percentage. If this step is set to zero, the match will be disabled.

#### **14) HIGH GAME REPLAYS**

This step is used to set the

### **III. TEST MODE**

number of replays to award when the highest game to date has been beaten.

#### **15) MAXIMUM CREDITS**

This step sets the maximum number of credits allowed on the game.

#### **16) TILT WARNINGS**

This step sets the number of tilts allowed before the ball in play is terminated.

#### **17) BALLS PER GAME**

This step sets the game to 3-ball play or 5-ball play.

#### **18) GAME MODE**

This step allows the game to be played in Replay, Replay + Tickets, Tickets Only, Add a Ball, or Novelty mode. In Replay mode all Specials and replays are allowed. Replay + Tickets mode is the same as Replay mode with the addition of one or more tickets to be issued (TICKETS TO AWARD) along with each replay. In Tickets Only mode one or more tickets will be issued in place of each replay won. In Add a Ball mode all Specials and Score Level Replays award an extra ball in place of a replay. In Novelty mode all Specials award 1,000,000 points and the Score Replay Levels are disabled. Also, in both the Add a Ball and Novelty modes the Match is disabled.

NOTE: If either the Replay + Tickets or Tickets Only setting is selected do not set the COIN METER setting to on.

#### **19) TICKETS TO AWARD**

This step allows the operator to set the number of tickets to award when a replay has been won. This setting will only apply when the GAME MODE is set to either Replay + Tickets, or Tickets Only. (see Installation section)

#### **20) LANGUAGE**

This step allows the Test Mode Steps to be displayed in English, German, or French.

#### **21) LEFT AND RIGHT CHUTES**

This step allows the left and

right coin chutes to be set as separate or the same. If the chutes are set to be the same, all the coins passing through either chute are totaled and the sum is used toward a credit based on the Left Chute Setting (step 9). Also, the sum will be displayed in the Left Chute Coins bookkeeping step and the Right Chute Coins step will not be used.

#### **22) LEFT AND RIGHT CHUTE BONUS**

If this step is set to on, the player is allowed to add one coin for one credit if there are any credits remaining on the game, or during any game. If there are no credits left on the game at the time that the game ends the player is also allowed this option for a time period.

#### **23) COIN METER**

If this step is set to on, an electromechanical coin meter will be incremented for each accepted coin. (see Installation section)  
NOTE: If this setting is on, do not use the Replay + Tickets or Tickets Only GAME MODE settings.

#### **24) AUTO-PERCENTAGING**

If this step is set to on, the Score Replay Levels will be adjusted periodically by 100,000 points so that the Game Percent Payout setting will match the actual Replay Percentage displayed in bookkeeping.

NOTE: If the GAME MODE is set to Add a Ball, the Extra Ball Percentage in bookkeeping is used in place of the Replay Percentage.

#### **25) REPLAY LIMIT**

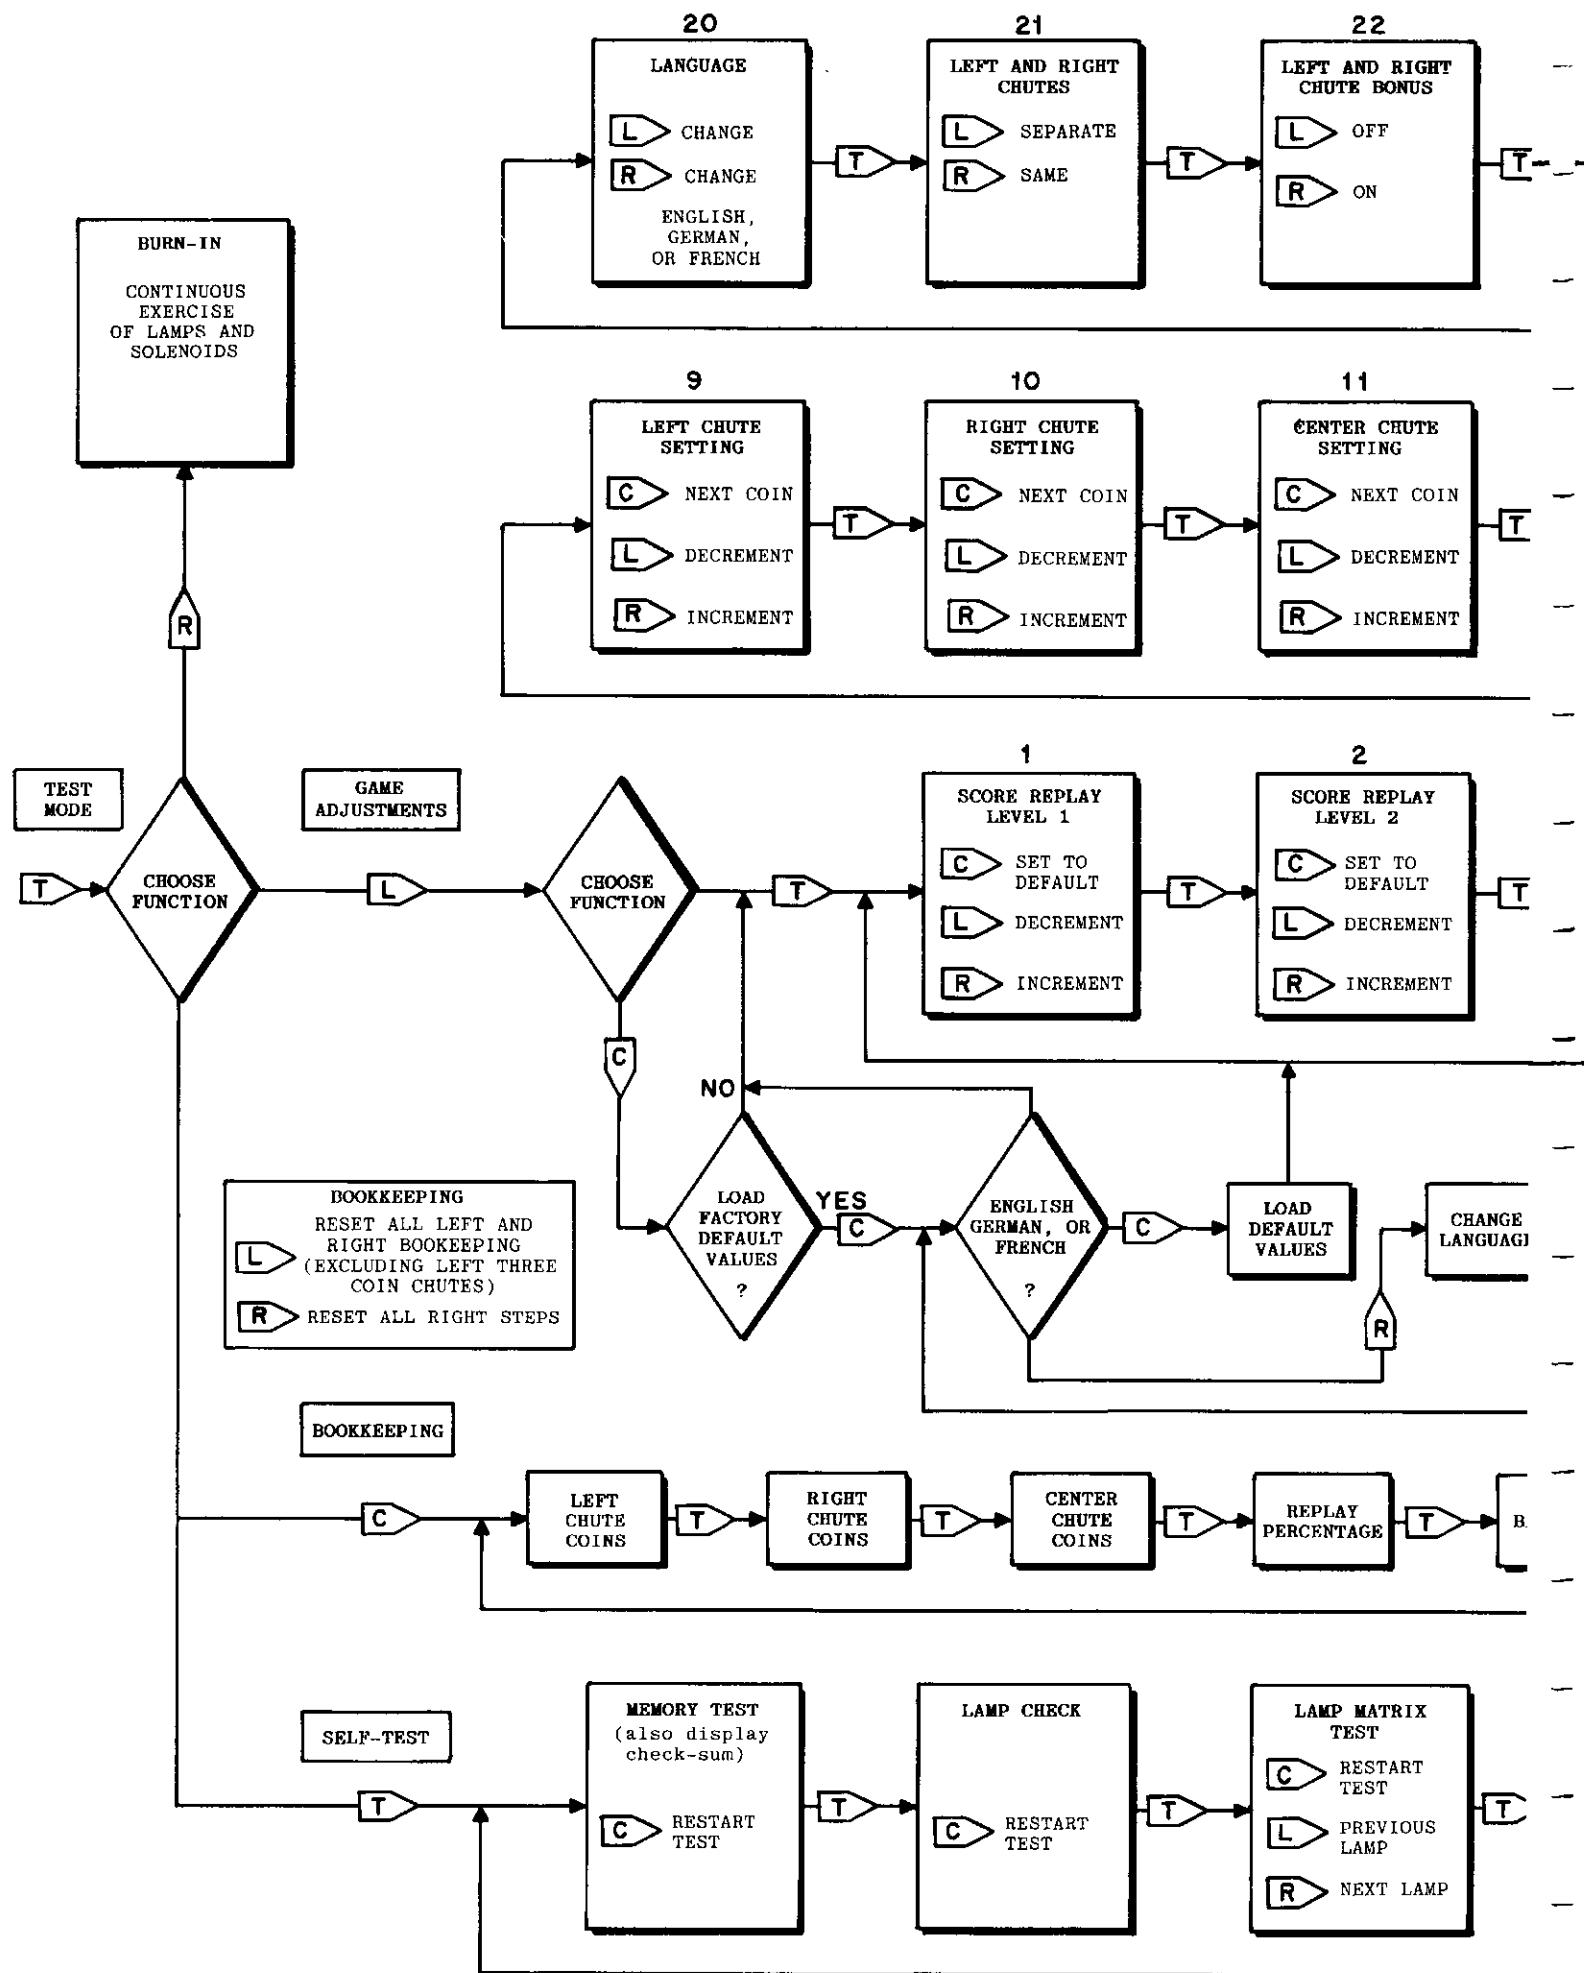

This step may be set to no limit or one per player per game.

#### **26) HIGH GAMES 2-5**

This step will determine if High Games to Date (2-5) will be saved or erased when power is turned off.

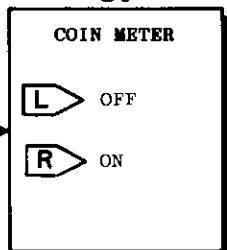

#### **27) ATTRACT SOUND**

This step determines whether or not sounds are enabled during the attract mode (game over).

IF FINE TUNE IS SELECTED IT WILL ALLOW THE OPERATOR TO SET EACH STEP HIMSELF. WHEN CHANGING FROM FINE TUNE TO OVERALL SETTINGS (VERY EASY, EASY, MEDIUM, HARD, AND VERY HARD) ALL PREVIOUS FINE TUNE SETTINGS WILL BE LOST.

**SYSTEM 3  
TEST MODE FLOWCHART**

### III. TEST MODE

#### 28) ATTRACT MESSAGE

This step is used to enable or disable an operator message during the attract mode (game over). This step is also used to enter a message into memory. To enter a message press the Credit button. The current message will be displayed and the cursor position will be indicated by the flashing character. If the current position is blank, a flashing directional arrow will appear. This type of arrow will indicate which direction the cursor will move if the Credit button is pressed. The Credit button is also used to

select characters after they have been chosen using the left and right black cabinet buttons.

#### 29) FREE PLAY

If this step is set to on, a game may be started without any credits left on the machine.

#### 30) RIGHT BOOKKEEPING AUTO-RESET

If this step is set to on, all the short term bookkeeping steps (in brackets) will reset after 2000 plays. Otherwise they will not reset until 10,000 games have been played on the machine.

### DEADLY WEAPON ADJUSTMENTS

#### OPERATOR ADJUSTMENT SETTINGS (\*\* = FACTORY DEFAULT SETTING)

#### 31) GAME DIFFICULTY -

AUTOMATICALLY SETS VARIOUS ADJUSTMENTS LISTED BELOW IN STEPS 32 - 47. THE FINE-TUNE SETTING ALLOWS THE OPERATOR TO INDIVIDUALLY SELECT EACH ADJUSTMENT.

STEP	GAME DIFFICULTY	VERY EASY	EASY	MEDIUM	HARD	VERY HARD
31				***		
32	JACKPOT TIME	EASY	MEDIUM	MEDIUM	HARD	HARD
33	INCREASE JACKPOT	EASY	EASY	MEDIUM	MEDIUM	HARD
34	WEAPON AUTO-ADVANCE	ON	ON	ON	OFF	OFF
35	TIILT WARNING	EASY	EASY	HARD	HARD	HARD
36	SPOT TARGETS	EASY	EASY	EASY	HARD	HARD
37	DROP TARGETS	EASY	EASY	MEDIUM	MEDIUM	HARD
38	LIGHT KICKSAVE	EASY	MEDIUM	MEDIUM	HARD	HARD
39	KICKSAVE	EASY	MEDIUM	MEDIUM	HARD	HARD
40	SPECIAL AWARDS	EASY	EASY	HARD	HARD	HARD
41	BONUS ROUND TIMES	VERY EASY	EASY	MEDIUM	HARD	VERY HARD
42	EXTRA BALL (SPOTS)	EASY	MEDIUM	MEDIUM	HARD	HARD
43	MYSTERY EXTRA BALL	EASY	EASY	MEDIUM	MEDIUM	HARD
44	EB FOR ARRESTS	EASY	EASY	EASY	MEDIUM	HARD
45	MYSTERY FEATURE	EASY	EASY	MEDIUM	MEDIUM	HARD
46	BADGE FEATURE	EASY	EASY	EASY	EASY	HARD
47	FLASHPOINT FEATURE	EASY	MEDIUM	MEDIUM	MEDIUM	HARD

#### 32) JACKPOT TIME -

Chooses the length of time that "EAST SIDE" or "WEST SIDE" flashes to collect jackpot.

EASY = Long time

\*\*\* MEDIUM = Medium time

HARD = Short time

#### 33) INCREASING JACKPOT -

Determines the point value added to the jackpot by lit spinners.

EASY = 30,000

\*\*\* MEDIUM = 20,000

HARD = 10,000

#### 34) WEAPON AUTO-ADVANCE -

Selects if a "WEAPON" letter is advanced at game over.

OFF = No

\*\*\* ON = Yes

#### 35) TIILT WARNING PENALTY -

Determines if a player loses his bonus and multiplier for tilt warnings.

EASY = No

\*\*\* HARD = Yes

### III. TEST MODE

- 36) SPOT TARGETS -  
\*\*\* EASY = May be completed in any order.  
HARD = Must be completed in sequence.
- 37) DROP TARGETS -  
EASY = Can be completed in any order.  
\*\*\* MEDIUM = Any order. Will reset after timeout.  
HARD = Must be completed in sequence.
- 38) LIGHT KICKSAVE -  
EASY = Always lit. Kicksave also lit at beginning of ball.  
\*\*\* MEDIUM = Always lit.  
HARD = Toggles on and off with pop bumpers.
- 39) KICKSAVE -  
EASY = Remains lit until kicksave is used.  
\*\*\* MEDIUM = Goes out after a long time.  
HARD = Goes out after a short time.
- 40) SPECIAL AWARDS -  
Selects the flashing crime scenes while in the "SPECIAL" bonus round.  
EASY = Lights new crime scene and continues.  
\*\*\* HARD = Only one allowed and ends round.
- 41) BONUS ROUND TIMES -  
Rate at which the "SPECIAL", "MILLION TIMES X", and "RIOT" bonus rounds count down.  
VERY EASY = Slowest  
EASY  
\*\*\* MEDIUM  
HARD  
VERY HARD = Fastest
- 42) EXTRA BALL -  
Selects when the spot target EB lights and if it toggles from pop bumpers.  
EASY = Lights at 2X multiplier.  
\*\*\* MEDIUM = Lights at 2X multiplier and toggles.  
HARD = Lights at 3X multiplier and toggles.
- 43) MYSTERY EXTRA BALL -  
Filters out EB from the mystery table if EB's are over the selected percentage.  
EASY = 40%  
\*\*\* MEDIUM = 30%  
HARD = 20%
- 44) EXTRA BALL FOR ARRESTS -  
\*\*\* EASY = 20 Arrests awards EB.  
MEDIUM = 40 Arrests awards EB.  
HARD = 60 Arrests awards EB.

- 45) MYSTERY FEATURE -  
Selects the quantity of 3,000 point awards in the "MYSTERY" and "PIK-5" table.  
EASY = 1  
\*\*\* MEDIUM = 3  
HARD = 7
- 46) BADGE FEATURE -  
Selects how long "ADD BADGE" lamps stay lit.  
\*\*\* EASY = Stays lit until all 5 badges are made.  
HARD = Turned off at the start of each ball.
- 47) FLASHPOINT FEATURE -  
Selects arrests scored for shot flashing crime scene during normal 1 ball play.  
EASY = 5 Arrests  
\*\*\* MEDIUM = 3 Arrests  
HARD = 1 Arrests
- 48) CATCH-UP FEATURE -  
Include "CATCH-UP ARRESTS" and "CATCH-UP SCORE" in "MYSTERY" and "PIK-5" table.  
OFF = No  
\*\*\* ON = Yes
- 49) HIGH ARRESTS TO DATE -  
This step adjusts the "HIGH ARRESTS" (0-99).
- 50) HIGH ARRESTS REPLAYS -  
Sets the number of replays to award when the highest arrests to date has been beaten (0-3).

### SOUND ADJUSTMENTS

The speaker(s) output is controlled by the potentiometer mounted on a bracket located inside the cabinet next to the front door hinge.

Turning the potentiometer counter-clockwise will decrease the volume. Turning it clockwise will increase the volume.

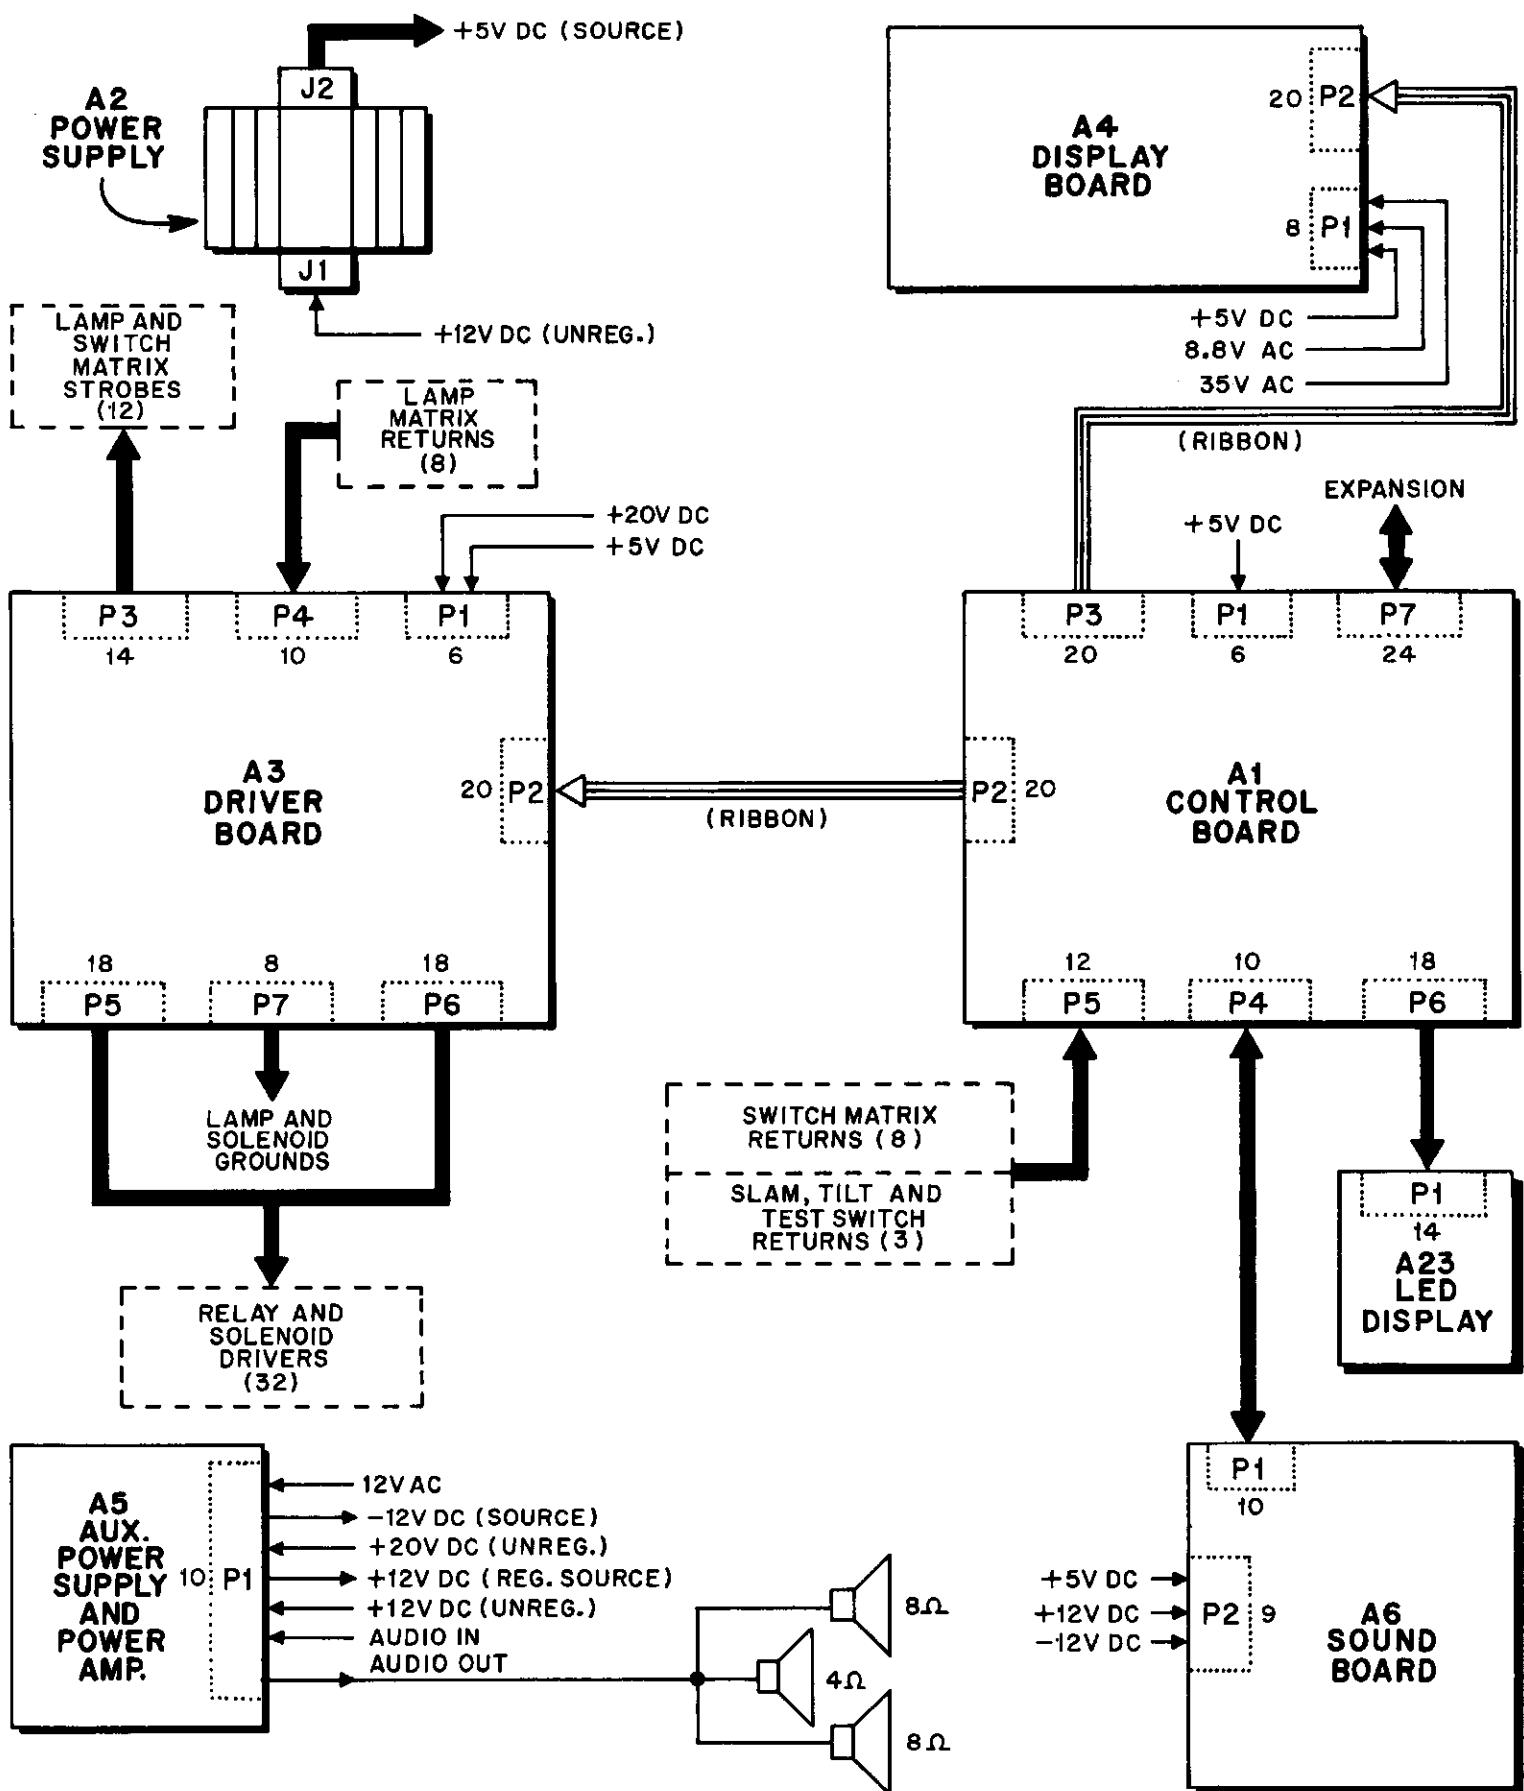

### POST ADJUSTMENTS

There are no post adjustment features in this game.

### IV. BURN-IN

This function can be used to continuously exercise all the lamps and solenoids in the game.

## IV. THEORY OF OPERATION

**FIGURE 1, SYSTEM 3 BLOCK DIAGRAM**

## IV. THEORY OF OPERATION

### A. CONTROL BOARD (A1)

The Control Board is supplied with 5vdc (A1P1) from the Power Supply (A2P2). The data contained in ram (U3) is kept valid when power is turned off by the lithium battery (BAT1) and controller (U6).

NOTE: When replacing either the battery, ram, or the controller there may be a message that appears in the display on power up the first time that indicates a low battery condition. If this occurs, turn the power off and back on again. The board should power up normally this time. If not, there is another problem on the board.

The Control Board can accommodate either a 27512 or a 27256 Eeprom. JP1 must be installed for a 27512 or JP2 for a 27256 Game Prom. A 4 Mhz oscillator is configured using U17,R1,R2,C22,C23, and XTAL1. The oscillator output is then divided by 2 to a 2Mhz clock by U18 which is used as the input clock to the 65C02 (U1) microprocessor. The clock output of U1 (pin 39) is used as a sync signal for reading from or writing to the peripheral devices.

Two versatile interface adapters (U4,U5) are used to develop the necessary control signals for the system. The waveform generated on the CB2 output of U4 triggers the NMI input of the microprocessor. This signal controls the display refresh rate. The display connector (A1P3) is comprised of several signals. The display blanking (DBLNK), digit strobe (DSTB), and digit data (DDATA) are generated by U4-17,U4-16, and U4-15 respectively. The display segment data is output by U7 and latched into the appropriate device on the Display Board by the display segment strobes (DS0-DS3).

The Driver Board connector (A1P2) contains all the signals necessary to operate the lamp and switch matrix strobes, the lamp matrix returns, and the solenoids. The

lamp clear (LCLR), lamp strobe (LSTB), and lamp strobe data (LDATA) are generated by U4-12,U4-11, and U4-10 respectively. The appropriate lamp return data during each active lamp strobe is output by U7 and latched into U5 on the Driver Board by the lamp return data strobe (LDS). The solenoid data is output by U7 and latched into the appropriate Driver Board device (U1-U4) by the solenoid strobes (SS0-SS3).

The switch matrix returns are input at A1P5, buffered by U19 and U20 and then input to U4. Discrete inputs are provided at A1P5 for the slam, tilt, and test switches.

The connection to the Sound Board (A1P4) is made up of eight sound data lines (SD0-SD7), a return line (SRET), and a reset line (MR).

A reset circuit is configured using U13,U14,R3, and C24. When power is applied to the system, the microprocessor reset pin (U1-40) is held low for approximately 10 milliseconds. The system can also be reset by pressing the switch (SW1) on the board. Whenever a reset occurs the master reset signal (MR) (U18-9) is held low until the display strobe (DSTB) becomes active. At this point the master reset goes high which enables the peripheral IC's on the Display Board and Driver Board to accept data.

A watchdog circuit is employed to monitor both the display digit strobe and the lamp strobe. This circuit is made up of U11,U12,U13,U16,R5,R6,R29, R32,R33,C20,C21,C28, and C29. If either the display strobe or the lamp strobe is missing for 330 milliseconds the system will be reset. The system will also be reset if the supply voltage drops below 4vdc. This voltage monitor is configured using U21,VR1,D1,D2,R34, and R35.

## IV. THEORY OF OPERATION

### B. POWER SUPPLY (A2)

The transformer panel delivers 12vdc to the input of the power supply. The regulated output voltage should be set to 5vdc by using potentiometer R3. This voltage is then supplied to the Control Board (A1), Driver Board (A3), Display Board (A4), Sound Board (A6), and any other auxillary board which may require it.

### C. DRIVER BOARD (A3)

Two voltages are supplied to this board at A3P1. The 5vdc is supplied from the Power Supply (A2) and the 20vdc is supplied from the transformer panel. The 20vdc is used to source the controlled lamps and the switch matrix. The Driver Board receives its data at A3P2 from the Control Board (A1P2). Solenoid data is latched into U1-U4. Lamp return data is latched into U5. Lamp and switch strobe data is shifted through U6 and U7. The comparators (U10,U11) are used to protect the MOSFETS (Q33-Q49). If a sensed input voltage exceeds the reference voltage ( $V_{ref}$ ), the corresponding MOSFET is turned off immediately following the lamp clear pulse (LCLR) supplied by U12 thus limiting the duty cycle. If the master reset signal (MR) is held low all lamps and solenoids will be disabled.

### D. DISPLAY BOARD (A4)

Several voltages are input to this board at A4P1. The power supply (A2) supplies 5vdc ( $V_{cc}$ ). The board develops  $V_{gg}$  from the 35vac supplied from the transformer panel. The transformer panel also sources 8.8vac to the display filaments. The display filaments are biased 9.1vdc above ground by the zener diode VR1.

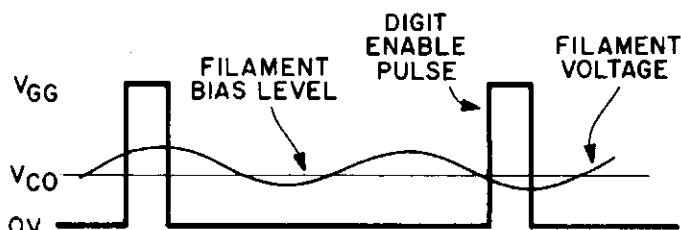

Figure 2. Display Waveform

The Display Board incorporates two vacuum fluorescent display tubes (DSP1,DSP2). The tube's digits are driven by U9. The segments (a-n) of the upper display are driven by U3,U4,U7, and U8. The segments of the lower display are driven by U1,U2,U5, and U6. Figure 1 shows the basic display waveform. Data is sent from the Control Board (A1P3) to the Display Board (A4P2).

### E. SOUND BOARD (A6)

The Sound Board consists of two 6502 microprocessor systems, a dual DAC, input ports to receive commands from the game Control Board, and a low level audio output, which is sent to the Auxiliary Power Supply Board for amplification.

The Sound Board requires three supply voltages +5V DC, +12V DC and -12V DC. In addition a power up reset signal is required from the Control Board.

#### SYSTEM CLOCK

A 4 MHz oscillator is configured with R11, R12, C14, C15, C22, XTAL-1 and T1. This 4MHz clock is divided by 4 to a 1 or 2 MHz clock for both processors clock input, pin 37 of N1 and T3. A 250 KHz signal from S1 pin 11 is the clock for the programmable timer section consisting of N5, H5, T5 and K5, pin 2.

#### INPUT CODE LATCH SYSTEM

Eight input lines from the Control Board come in on A6P1 and are pulled up by S1P1 and sent to the two input code latches A3 and B2, one for each microprocessor system. A2, pin 8, becomes a logic high when any of its inputs are low. This output is connected to pin 11 of the input code latches (A3 and B2). A positive edge at pin 11 causes A3 and B2 to latch the data at their inputs. A2 pin 8 is also connected to the clock inputs of two flip flops, A4 pin 3 and A4 pin 11. When A2 pin 8 goes high, both flip flops are clocked, setting both Q outputs low. The Q outputs, A4 pin 6 and pin 8, are connected to both of the 6502's active low interrupt request lines,

## **IV. THEORY OF OPERATION**

T3 and N1, pin 4. The  $\bar{Q}$  outputs of A4 will stay low until the associated 6502 reads its input port therefore clearing the interrupt.

### **SYSTEM EPROMS**

The sound board is designed to accommodate different types of EPROMS. Jumpers JP1, 2, 3, and 4 should be set to the proper position based on the EPROM being used, (See Schematic Diagram).

### **RESET**

The Sound Board receives an external reset signal from A1P4 pin 10. This active low reset signal is pulled up by R34 and sent to G5, pin 1 (2-input AND gate). However, if a manual reset is desired, pushing switch SW2 will reset the processor.

### **MAIN SUMMER**

The main summer consists of R13 through R17 and B1, pins 12, 13 and 14. B1 pin 14 is the main output from the Sound Board, at A6P2 pin 9, and will swing plus or minus 5V peak to peak.

### **F. AUXILIARY SOUND BOARD (A20)**

The Auxiliary Sound Board consists of a YM2151 (U1) sound generator, a YM3014 (U2) DAC, and a LM324 op-amp (U3). The master Sound Board (A6), controls the YM2151 (U1) sound chip by sending commands via the data bus of the master Sound Board's T3 micro-processor. The YM2151 responds to

these commands and serially sends sound data to the YM3014 DAC by means of the CLK, SD, and SH2 lines. The DAC converts this serial data into an analog signal which is buffered and amplified by U3, a LM324 op-amp. This analog signal is then sent back to the main summer of the master Sound Board (A6).

### **G. SENSOR BOARD (A15)**

This board is used to detect if any flipper is energized and then inputs the data to the Control Board to be processed. This board therefore eliminates the need for a second switch to be used on the flipper assembly itself. U1 is an optocoupler device which converts the input signal from the flipper circuit when energized to a signal which can be recognized by the Control Board as a valid switch closure.

### **H. LED DISPLAY BOARD (A23)**

This board is used to display runs scored by each player. Two voltages are supplied at A23P1. The 5vdc supplies power to the IC's while the 12vdc supplies power for the LED displays. The multiplexed data is sent from the Control Board (A1P6) to the LED Display Board (A23P1). Data lines DX0-DX3 output the bcd character data (0-9) to the 7-segment decoder (U3). Data lines DX4-DX6 output the active digit data to the latched decoder (U1). The latch signal is provided by AX4.

## V. GENERAL INFORMATION

### A. PRINTED CIRCUIT BOARDS ARE DESIGNATED AS FOLLOWS:

A1 - Control Board  
A2 - Power Supply  
A3 - Driver Board  
A4 - Display Board  
A5 - Auxiliary Power Supply  
A6 - Sound Board  
A13 - Resistor Board  
A15 - Sensor Board  
A17 - Diode Board  
A20 - Auxiliary Sound Board  
A22 - Playboard Lamp Board  
A23 - LED Display Board

### B. WIRE COLORS ARE SHOWN AS NUMBERS:

0 Black  
1 Brown  
2 Red  
3 Orange  
4 Yellow  
5 Green  
6 Blue  
7 Violet  
8 Gray  
9 White

For example, 688 is a BLUE-GRAY-GRAY striped wire.

Printed circuit board connectors will be labeled AX-JX. For example, A3-J4 is the connector J4 to the driver board (A3).

## VII. PARTS INFORMATION

### KICKING TARGET ASSEMBLY

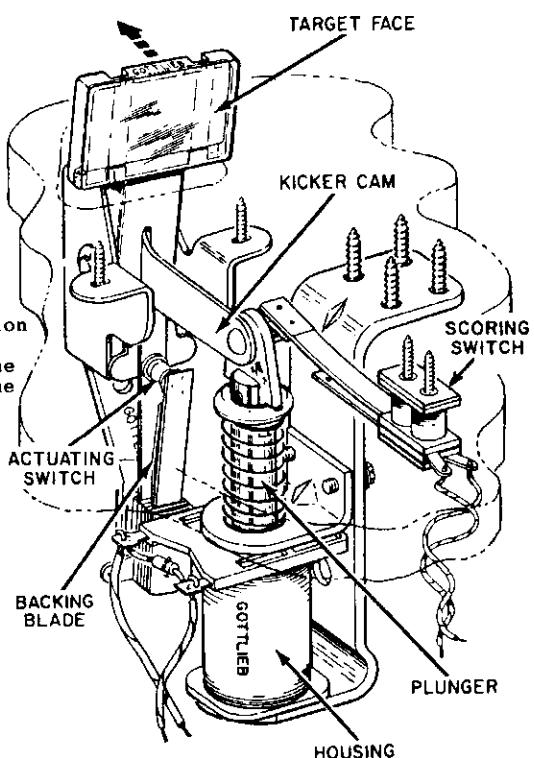

ITEM	DESCRIPTION	PART NO.
1	Kicking Target Assembly	27454
2	Plastic Shield	20210P
3	Mounting Bracket	15409
4	Coil	5195
5	Coil Stop And Mtg. Bracket	20597
6	Coil Sleeve	5064
7	Spring	1636
8	Link and Plunger Assembly	22425
8A	Target Kicker Cam (Used)	20209
9	Target Kicker Cam (Shown)	20494
10	Snap Bushing	MP-15
11	Target Arm	20207
12	Actuating Switch	27543
13	Target Housing	20206
14	Target Shaft	20211
15	E-Ring	FA-682
	Spring Retaining Washer	22233

#### KICKING TARGET ADJUSTMENT

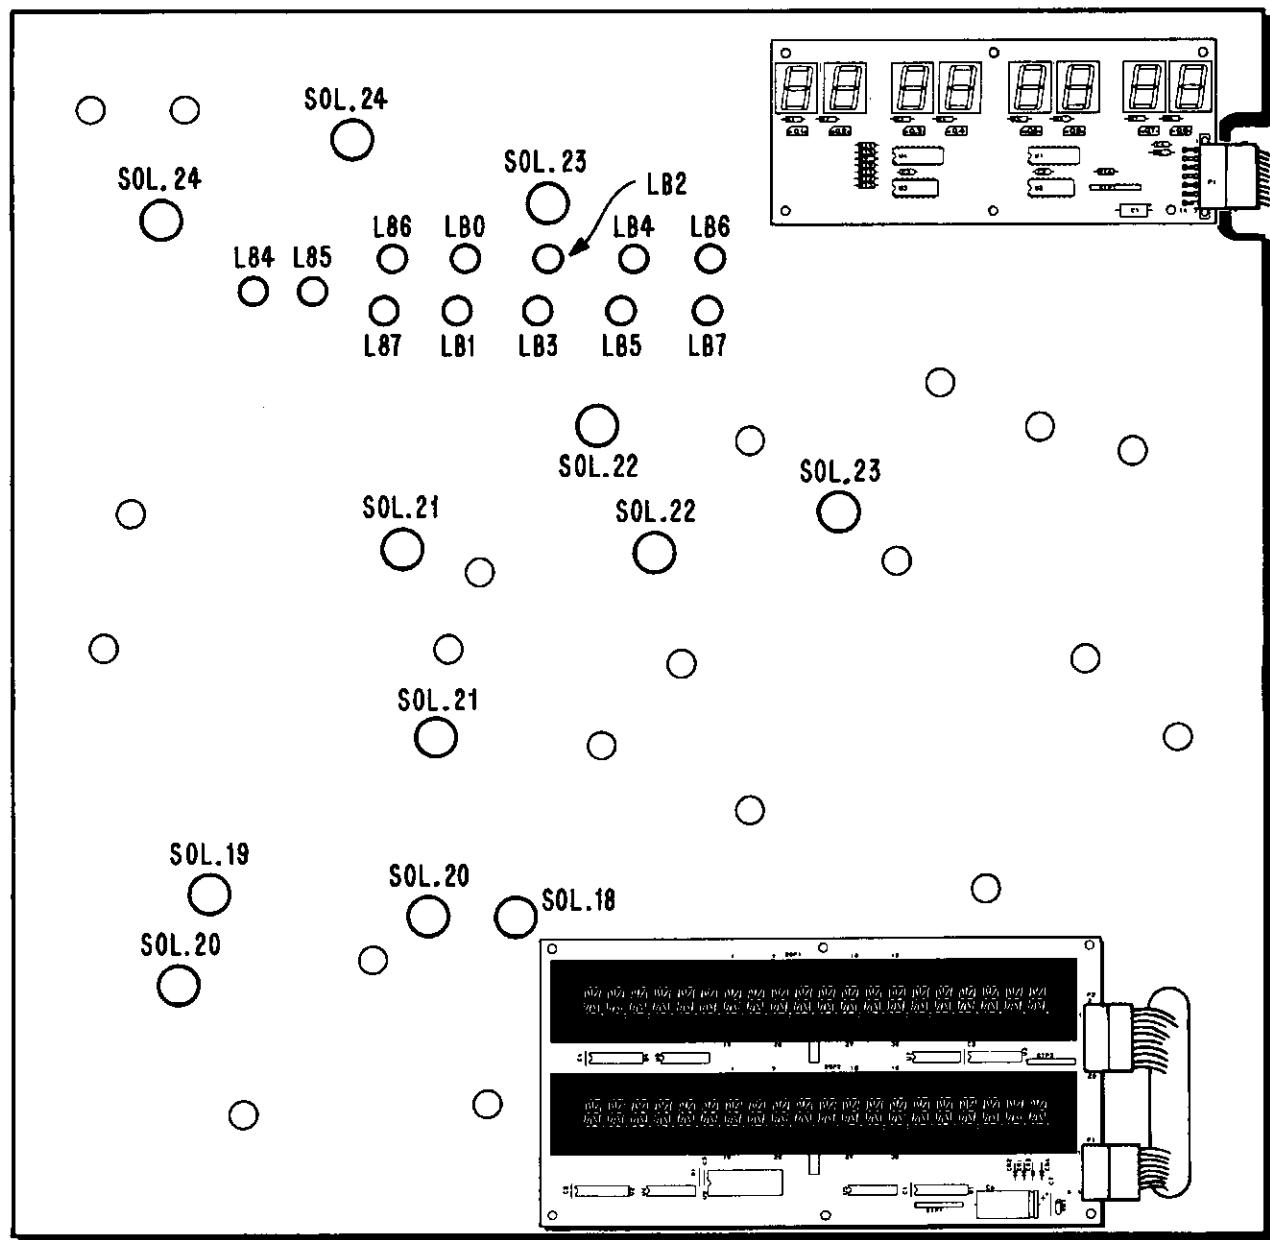

Push the PLUNGER down until it "bottoms out" in the coil HOUSING. Push the TARGET FACE in the direction of the arrow shown until it makes contact with the vertical leg of the KICKER CAM. The vertical leg of the cam is located behind the kicking target and is not shown.

Observe that the gap between the ACTUATING SWITCH contacts is at least 1/32nd of an inch. If not, bend the switch's BACKING BLADE in the proper direction.

# XI. PARTS INFORMATION

## LIGHTBOX INSERT LAMP IDENTIFICATION

LB7	"N"	

NOTE:  
LAMPS NOT DESIGNATED ARE  
GENERAL ILLUMINATION, TYPE #44.

## XI. PARTS INFORMATION

### UNIQUE PARTS

The following listing denotes new parts and assemblies unique to Deadly Weapon, Game #724. Part Numbers prefixed with an asterisk (\*) will be illustrated or can be located on pages 32 and 56 thru 65. Numbers in parenthesis ( ) indicate multiple quantities.

#### PLAYBOARD

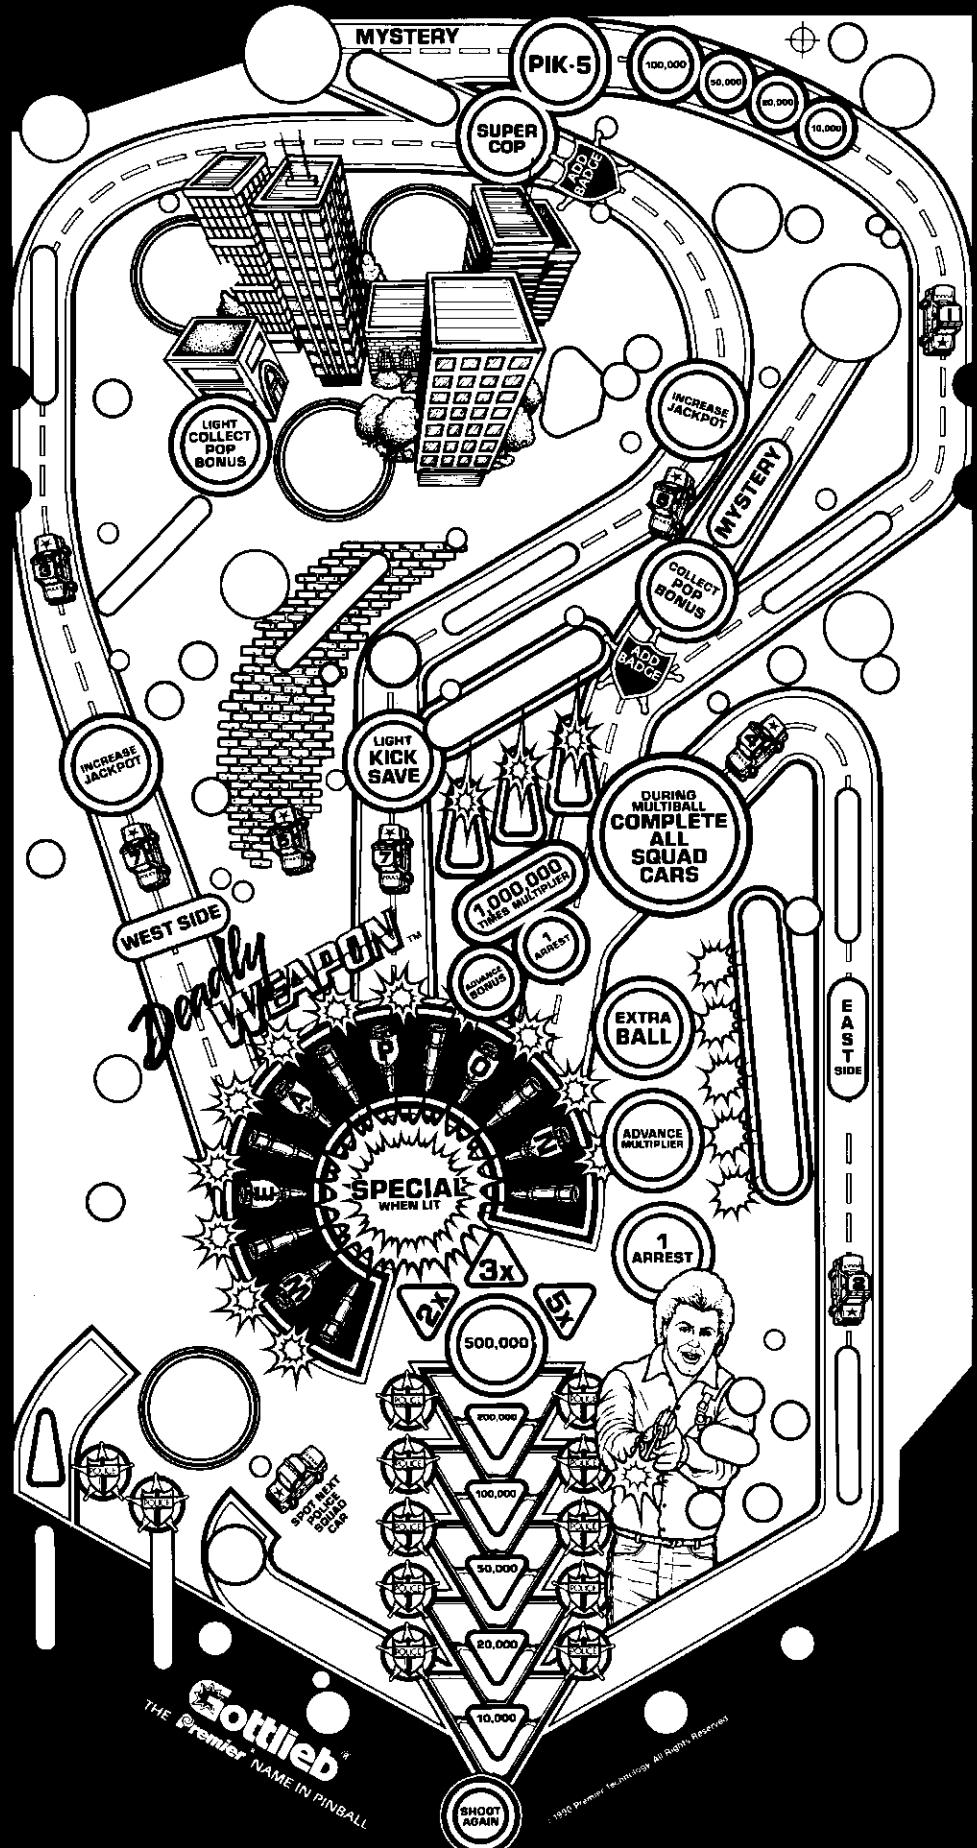

<u>ITEM/DESCRIPTION</u>	<u>PART NO.</u>
Hairpin Clip (12).....	*6947
Support Bracket (2).....	*27391
Flat Rail.....	*27401
Light Strip Mounting Bracket (12).....	*27427
Plastic Shield Set.....	*27461 and *27462
"Z" Bracket.....	*27501
Decal, Grill.....	*27502
Decal, Alley.....	*27503
Decal, Gas Station.....	*27504
